ACCESSORIES

All the accessories of ISO 15552 cylinders can be used, except for the guide units (GDS, GDH, GDM) since the protrusion of the locking piston interferes with the guide unit.

NB: The screws used to secure the accessory to the heads fitted with a stop must be longer than those supplied together with the accessories. The screw length is calculated by summing up the catalogue-specified thickness of the accessory flange and the BG1 dimension, rounding down to -3 mm.

$$L = BG2 + H - (0 - 3) \text{ mm}$$

The first cycle involves movement of the piston (towards head B) with consequent anti-clockwise rotation of the pinion.

ACTUAL ROTATION ANGLE

Actuators without regulation of the rotation angle: the manufactural tolerance is + 4°/0° compared to the nominal value

Actuators with regulation of the rotation angle: the possible regulation ranges from + 2°/- 20°.

Anti-rotation of the piston rod		YES	
Maximum angle of twist of the piston rod		1°30'	
Motor layout		In line with piston rod axis	
Uncontrolled impact at the end of stroke		NOT ALLOWED (it provides an extra-stroke minimum 5 mm)	
Sensor magnet		YES	
Work position		Any	

** indicative average data that gets influenced by various factors such as the stroke, the type of motor, the cylinder version, etc ...

MECHANICAL FEATURES		Ball screw		Trapezoidal screw (acme) with bronze bushing
Screw pitch (p)	mm	4	10	4
Screw diameter	mm	12	12	14
Static axial load (F _s)*	N	3000	3000	3000
Dynamic axial load (F)	N	5200	3160	see graph force/speed
		Calculate mean axial load and the calculate life		N.B.: 40% duty cycle, i.e. the cylinder must work maximum 40% of time to allow the screw/ball screw nut to cool down.
Maximum number of revs	1/min	3000	3000	750
Maximum speed (V _{max})	mm/s	200	500	50
"K" ratio of motor revs and piston rod speed	n/V	15	6	15

Example: V = 100 mm/s; pitch = 10 → K=6 n= V x K = 100 x 6 = 600 rpm

* **N.B.:** Static loads bearable without damage. Useful loads are shown in the diagrams on general catalogue.

WEIGHTS (ONLY CYLINDER)		Ball screw		Trapezoidal screw (acme) with bronze bushing
Screw pitch (p)	mm	4	10	4
Weight at stroke 0, without motor	g	610	620	720
Additional weight each mm of stroke	g	4.3	4.3	4.3
Moving mass at stroke 0 (M _x)	g	189.4	189.4	209.4
Additional moving mass each mm of stroke	g	1.3	1.3	1.3

N.B.: You get the total weight of a complete cylinder by adding: weight stroke 0 + stroke [mm] x weight for each mm of stroke + weight of the motor.

MASS MOMENTS OF INERTIA		Ball screw		Trapezoidal screw (acme) with bronze bushing
Screw pitch	mm	4	10	4
J ₀ at stroke 0	kgmm ²	9.9849	10.0979	10.2979
J ₁ each metre of stroke	kgmm ² /m	12.76	13.76	16.81
J ₂ each kg of load	kgmm ² /kg	0.4053	2.533	0.4053

The total mass moment of inertia (J_{tot}) reduced for the motor is: J_{tot} = J₀ + J₁ · stroke [m] + J₂ · (load [kg] + M_x [kg])

M_x is defined in the weights table.

The reduced moment of inertia of total mass at the driving shaft is: $J_{red} = [J_1 \cdot Corsa [m] + J_2 \cdot (Carico [kg] + Mx [kg])] + J_0 \cdot \tau^2 + J_3$

$\tau = 1/u$

$u =$ Gearing ratio

$J_3 = J_{gear ratio}$

KEY TO CODES

A complete system has a compound **description** of all its subsystems listed in sequence from left to right, as shown below.

The abbreviation of each subsystem is obtained by taking the code and omitting the first digits 02282.

For example: the digital 8-input signal module is identified with code 02282S01; only write S01 in the description.

The abbreviation of each base for valves consists of:

Abbreviation of the Base	Manual valve control	Type of valves
Obtained from the code, after removing 02282	0 = monostable 1 = bistable	Valves Dummy valve Bypass
Example 4-position base, 8 solenoid pilots, Ø 6 pipe; code 02282B4086666	Monostable	2 monostable 5/2 valves - V 1 double 3/2 NO - W 1 dummy valve - F
Abbreviation B4086666	0	VVWF

The description is therefore a sequence of this type:

EB 80	- S _	- E _ _	- P _ _ _	- B _ _ _ _	- M _ _ _ _	- C _
EB 80 system	Signal module (if present)	Electrical connection	Compressed air supply	Base for valves (as many as there are) with normal or dummy	Intermediate (if present)	Closed end-plate

Endless number of EB 80 systems can be obtained and their description is variable in length, which can be very extended. The actual ordering CODE of an EB 80 system is created by Metal Work S.p.A. with a limited number of characters. The ordering code is not explicative. The description only is univocal, complete and explicative.

EB 80 ELECTRICAL CONNECTION - E

TECHNICAL DATA	
Supply voltage range	V 12 -10% 24 +30%
Minimum operating voltage	V 10.8 *
Maximum operating voltage	V 31.2
Maximum admissible voltage	V 32 ***
Drive (for multi-pole)	PNP or NPN
Solenoid rating	100% ED
Power supply without controlled valves:	
steady rate, with multi-pole connection	W 0.1 for "Electrical connection - E" + 0.25 for each "Base - B"
steady rate, with fieldbus connection	W 4 for "Electrical connection - E" + 0.25 for each "Base - B"
Signal module supply power	See chapter "Signal module - S"
Maximum operating power supply (data useful for the sizing of the power supply unit)	W 3.15 for each solenoid pilot operated simultaneously + input and output
Maximum current admissible with multi-pole connection	A 6 continuous, 9 instantaneous
with fieldbus connection	A 4 continuous, 6 instantaneous for valve supply 4 continuous, 6 instantaneous for bus and signal supply
Protection	Overload and short-circuit protected solenoid pilot Output
Diagnostics	LED signal on valve, LED light on electrical connection. With multi-pole: fault signal OUT activation. With field bus: software message.
Faults signalled	Short-circuited solenoid pilot; Solenoid pilot broken or missing Power supply out of range (under-voltage or over-voltage) With fieldbus only, different configuration, on switching on, compared to that stored; communication control between modules
Ambient temperature	°C -10 to + 50 °F 14 to 122
Versions	Plug connectors, fieldbus with various protocols, additional island
Maximum number of controllable solenoid pilots **	25-pin connector 44-pin connector Fieldbus additional island 21 38 128 128
Maximum number of controllable solenoid valves	Ditto as above, depending on the number of solenoid pilots and type of base
Degree of protection	IP65 (with connectors connected or plugged if not used)
Weight	g 180 180 350 320

* Minimum voltage 10.8V required at solenoid pilots. Check the minimum voltage at the power pack output using the calculations shown on general catalogue.

** If the units are made up of bases exceeding the maximum number of controllable solenoid pilots (by mounting a dummy valve N or a bypass Y in the excess positions), operation is only possible on the islands with a positive signal (PNP), conversely (with an NPN signal), an error message is generated by the diagnostic system.

*** IMPORTANT! Voltage greater than 32VDC will damage the system irreparably.

HDM + B&R

IP20 7XV--50-11 SMART CONNECTOR

It is a plug connector with IP20 protection that contains the X system electronics. It can be connected with HDM islands, using the special input end-plate, type 1, code 0227301207 or the special input end-plate type 1-11, code 0227301206.

IP67 7XV--50-51 SMART CONNECTOR

It is a plug connector with IP67 protection, that contains the X system electronics. It can be connected with HDM islands, using the special input end-plate type 1, code 0227301207, or the special input end-plate, type 1-11 code 0227301206.

X67 I/O SYSTEM MODULES

These are modules with IP67 protection, connected to the X system, for handling inputs and outputs. It is interesting to note that their size is such that they can be fixed directly to the HDM input end-plate type 1-11, code 0227301206 (N.B. NOT to be fixed to the HDM end-plate type 1, code 0227301207).

X67 BUS CONTROLLER MODULES

These are modules with protection IP67, receiving a signal according to one of the DP Profibus, CAN open, Device Net, Ethernet Powerlink protocols (the module code differs obviously according to the protocol being controlled). The output signal is according to the X-system. These are gateways converting the signals of a field bus into an X-system. These modules control the inputs and/or outputs via the M8 connectors provided. They can be fixed directly to the HDM input end-plate type 1-11, code 0227301206 (N.B. NOT to be fixed to the HDM end-plate, type 1, code 0227301207).

Condensate drain	RMSA: drain with manual condensate discharge and automatic discharge at zero pressure RA: automatic drain with condensate discharge, independent of pressure and flow rate Version conveys the draining by inserting the pipe having internal diameter 6 mm in the lower port. SAC: automatic drain with condensate discharge. Operates by depression – requires variable air take-offs. Note: the maximum input pressure for the RA version must not exceed 10 bar No. 2 M4 screws No. 2 M5 screws							
Wall fixing screws	No. 2 M4 screws			No. 2 M5 screws				
Notes on use	The pressure must always be set upwards. For increased sensitivity, use a pressure regulator with a rated pressure as close as possible to the required value. On request version without overpressure exhaust.

Drain		RMSA - SAC	RMSA - SAC - RA			RMSA - RA		

RMSA: drain with manual condensate discharge and automatic discharge at zero pressure
 RA: automatic drain with condensate discharge, independent of pressure and flow rate
 Version conveys the draining by inserting the pipe having internal diameter 6 mm in the lower port.
 SAC: automatic drain with condensate discharge. **Operates by depression - requires variable air take-offs.**
 Filtered, lubricated or unlubricated compressed air. Lubrication, if used, must be continuous.

Notes on use
 The regulator pressure must always be set upwards. For increased sensitivity, use a pressure regulator with a rated pressure as close as possible to the required value. **Do not take air from pressure gauge ports.**
The maximum inlet pressure for the version with RA automatic condensate drainage must not exceed 10 bar.

Fluid	Filtered compressed air											
Recommended oils	ISO and UNI FD22 (Energol HPL to Spinesso to Mobil DTE to Tellus Oil).											
Notes on use	Install the lubricator as close as possible to the point of use. Fill the lubricator bowl with oil before pressurizing the system. Do not use cleaning oils, brake fluid oils or solvents in general. For the best lubrication results, set the drip rate to one drop per 300-600 Nl.

HOW TO ORDER

ORDERING CODES

You can choose among numerous variants and options. The product code so personalised is made up by compiling the diagram below. The code so compiled must be specified on the order. A label showing the code and its pneumatic diagram is affixed onto the product.

* a pressure switch version and/or electric V3V and/or electric progressive actuator.

● **NB: versions valid only for the electric ONE (code 54...)**

- A ONE electric or non-electric**
ONE non-electric: there is no component actuated electrically: select code 53. In this case, the unit comes without any M12x1 connector, LED, pressure switch, or electric V3V.
ONE electric: there is at least one component actuated electrically, and thus the pressure switch and/or electric V3V (and/or the electrical soft start valve) select code 54. In this case, the unit comes with the M12x1 connector and 3 LEDs. Only the LEDs associated with the functions installed will be active.
- B Air intake**
 There are 5 different gas cylindrical threads: 1/4", 3/8", 1/2", 3/4" and 1".
- C Degree of filtration**
 A cartridge with a degree of filtering of 5 µm (yellow) or 20 µm (white) is available. This value is marked on the plug.
- D Clogged filter signal**
 If the filter gets so clogged up that it causes an excessive drop in pressure as the air passes through, the orange indicator will project from the body by a few millimetres.
- E Condensate drain**
RMSA: the condensate is drained out automatically only by relieving the air pull the knurled knob for having the same result.
Automatic (RA): a floating system that automatically drains the condensate out whenever the level of water in the bowl reaches the set value.
- F Pressure regulation**
 There are three possible regulation fields.
 The value is marked on the regulation knob.
- G Valves**
 There are 11 different combinations. The electric valves are clearly selectable only if the initial code is 54, i.e. ONE electric.
- 0 - No valves present
 - 1 - V3V manual: is a 3/2 valve that in a set position allows the air to flow and in the other it closes the passage and discharges the pressure downstream.
 - 2 - V3V manual with padlock: like the previous one, with the possibility of inserting a padlock (included in the supply with 2 keys) in the valve closed position.
 - 3 - V3V manual and soft start valve: when the manual V3V valve is operated, the pressure starts to increase slowly, with a fine adjustable ramp, and when it reaches about 30-40% of the set value, the valve opens completely and the pressure rises to the set value.
 - 4 - V3V manual with padlock and soft start valve: like the previous, with the padlock device on the manual V3V in "OFF" position.
 - 5 - V3V manual and V3V electric: two V3V in series are present, one is manual the other electrical. By operating both the valve the air flow is allowed. If one or two are switched OFF, the air downstream is relieved. The electrical one can also be operated manually by reefing pushed the "TEST" button
 - 6 - V3V manual with padlock and V3V electric: like the previous, with the padlock device in "OFF" position.
 - 7 - V3V manual and APR electric: One manual V3V and one soft start valve are present. When both are operated, the pressure starts to increase slowly, with a fine adjustable ramp, and when it reaches about 30-40% of the set value, the valve opens completely and the pressure rises to the set value.
 - 8 - V3V manual with padlock and APR electric: like the previous, with the padlock device on the manual V3V in "OFF" position.
 - 9 - V3V electric: It's present only the electrical V3V. The valve will open if it is powered on. When the power supply is switched off, the valve closes and air downstream is relieved. The valve can also be operated manually by keeping pushed the test button.
 - A - APR electric: It's present only the electric soft start valve. When it is powered ON, the pressure starts to increase slowly, with a fine adjustable ramp, and when it reaches about 30-40% of the set value, the valve opens completely and the pressure rises to the set value.
- H Pressure switch**
 The pressure switch has a switching contact, which means you can have a normally-open signal or a normally-close signal. It is also connected to the NC and NO LEDs which come on if the actual pressure is less or greater than the set pressure, respectively. The LEDs only come on if an electric charge is connected to them.
- I Air outlet**
 Five different gas cylindrical threads are available: 1/4", 3/8", 1/2", 3/4" and 1". It is possible to choose a thread other than the one on the inlet port.
- L Free positions for special executions.**

TAPERED THREAD FITTINGS WITH PTFE

Metal Work can supply fittings with a tapered thread coated in polytetrafluorethylene. This coating can be used with all Metal Work products that have a 1/8" to 1/2" gas taper thread, particularly the following:

- push-in fittings type R1C, R31C, R32C and R39C
- series A fittings types A2, A4, A5, A10, A12, A13, A15, A16, A17, A18 and A25
- series B bicone fittings, types B1, B5, B7 and B8
- series C push-in fittings, types C1, C5, C7, C8.

TECHNICAL FEATURES	
Threaded coupling covered by PTFE	1/8" - 1/4" - 3/8" - 1/2"
Temperature range for PTFE	- 45 to + 80 - 49 to + 176
Pressure range	Except for limitations established for the fitting on which PTFE is applied.
Fluid	The same as for the fitting on which PTFE is applied. Vacuum, compressed air.

KEY TO CODES

Fittings with a PTFE thread have the same code as the standard fitting, with the addition of the suffix T.

Example

The 1/8" 1/8" A2 fitting has code 2102001, so the PTFE version has code 2102001T.

LED DIAGNOSTICS OVERVIEW

LED off or red LED flashing	Temporarily on start-up: the output voltage has not yet reached 24V If this condition persists, the applied load is probably excessive with respect to the input pressure.
Green LED fixed	Normal operation: the output voltage has reached 24V Optimal use of the compressed air supply.
Green LED flashing	Normal operation: the output voltage has reached 24V but the generator is used below capacity (can supply more power at the same compressed air supply)
Red and Green LED flashing	Charge short-circuited: output voltage is automatically cut off. It will return within the tolerance range upon elimination of overload.
Red LED fixed	The maximum supply pressure has been exceeded and the device risks getting damaged.
